June 1–2 | English

Who should attend the training?

Our training is designed for a wide range of mining professionals involved in plant operations and maintenance.

Participants may include maintenance personnel, operators, planners, supervisors, managers, team leaders, quality control personnel, plant engineers, and other technical staff.

These seminars are educational—not sales presentations. They focus on practical operating and maintenance best practices for Metso equipment, providing hands-on, technical knowledge that helps reduce operating costs and improve performance.

Operations that incorporate technical training into their annual development programs can realize significant benefits, including increased productivity, lower maintenance and repair costs, and improved equipment availability.
