

RDF production

Customer: ZAKŁADY USŁUGOWE Sp. z o.o., Poland
Facility: M&J PreShred 1000M - 6
Capacity: 20 tons/h

*High
quality and
low costs*

*"Hands down,
PreShred 1000S fulfils
all our expectations
to the installation. It is
basically failure-free."*

An obvious candidate

ZAKŁADY USŁUGOWE Sp. z o.o has the official status of "Regional Installation Processing Plant for Communal Waste" for the city of Przemyśl and the surrounding municipalities. The installation consists of a mechanical processing section, a composting plant and a landfill. Stability is alpha & omega for ZAKŁADY USŁUGOWE Sp. z o.o., which therefore always seeks the highest possible quality when designing the installation. This made Metso the obvious choice when a shredder had to be selected. Indeed, after seeing how it performed, PreShred 1000S was sure not to disappoint.

Perfect for any job

The mechanical section uses the new shredder to produce RDF and pre-RDF. Occasionally, the PreShred 1000S is also used to shred bulky waste and recycling materials like PETs, cardboard and bulky waste. RDF and pre-RDF are made from communal waste after mechanical processing (by screens and separators). The output capacity of the shredder matches the

company's needs and ensures low maintenance costs, high performance and a uniform end product. It is suitable for shredding all kinds of communal waste and does so without problems, meaning that the plant is guaranteed maximum uptime.

The company

The company was founded in 1991 in Krakow following a merger between a number of companies. The company offers a wide range of services in addition to municipal waste management, including maintenance of green areas, parking and cleaning facilities. The company employs over 600 employees.
