Flotation services

OK Cell & TankCell® bearing unit refurbishment

This refurbishment service aims to restore the original bearing unit quality and performance of your OK Cell or TankCell®, ensuring maximum service life.

Factory warranty

We are dedicated to providing our customers with the highest quality service and assurance that each unit we refurbish will perform to original OEM specifications. We have such confidence in our equipment refurbishment service, that we offer a standard factory warranty on all parts and workmanship performed during refurbishment.

Why run test your refurbished unit?

Run testing ensures proper unit re-assembly before the unit is placed back into service. Performed at the service center, it confirms the bearing is well aligned and ready for service.

Why pressure test your refurbished unit?

Pressure testing any rebuilt bearing is essential for ensuring peak performance of your flotation cell. Incorrectly installed seals lead to process air leakages, which results in under performing equipment and higher resource demand. All refurbished units target optimal performance and are true OEM solutions.

Trusted partner in the flotation industry

Our extensive knowledge in bearing units is built on the manufacture and assembly work conducted over the past 30 years. High quality refurbishments require experience and thorough procedures. Numerous steps are required in a defined sequence.

Driving sustainable operations

Our bearing refurbishment service can significantly extend the life of unreliable, aging equipment and is often preferred as an alternative to new equipment purchases. The refurbishment of old equipment is sustainable from an environment and economic perspective. It significantly reduces material requirement when compared with the procurement of new equipment, whilst improving performance and reliability.

Benefits

- Lower lifecycle costs
- Factory warranty
- OEM parts replacement
- Run and pressure tested before delivery
- Extended equipment lifetime
- Sustainable operations support

Two on-demand service packages available

1. Refurbishment service

Our team of experts meticulously inspect, disassemble, and replace all damaged components of your bearing unit. The bearing unit will be refurbished using OEM parts to ensure optimal restoration, backed by our technical support, providing a cost-effective alternative to secure a long-term solution for your equipment.

2. On-demand rotatable program

The on-demand rotatable program allows you to exchange worn bearing units for certified-refurbished equipment at a fixed price. Factory warranty applies to all certified-refurbished units. Metso holds limited inventory for select bearing unit models.

Ask your sales representative about the available inventory of the on-demand rotatable program in your region.
