Biodiversity policy

Metso provides products, solutions and services for the Aggregates, Minerals processing, and Metals refining industries.

Our vision is to be customers' number one choice for sustainable use of the earth's natural resources. Biodiversity management is an integral part of this vision.

- Metso top management demonstrates leadership, accountability and active commitment regarding our business biodiversity impact.
- We protect the environment throughout the value chain, aiming to minimize air and noise pollution, waste streams generation, and reduce the use of natural resources and energy.
- We deliver sustainable products and services that help our customers mitigate or remove the adverse impact on biodiversity resulting from their operations.
- We fulfill applicable legal requirements and standards, and take care of the company's environmental, economic and social responsibilities concerning biodiversity. Our responsibility includes contractors, suppliers or other third parties visiting or working in our premises or working under our supervision on customer sites.
- We identify and manage biodiversity related environmental risks and opportunities in Metso locations and throughout the Metso logistics chain, particularly in areas of high ecological value, and we operate in a manner that prevents and minimizes biodiversity loss.
- In our own operations Metso promotes awareness and training on biodiversity and conservation, encouraging best practices.
- Metso strives to work with suppliers of raw materials, finished products and packaging materials that demonstrate their commitment to biodiversity management practices.

While the President and CEO, and Metso Leadership Team are ultimately responsible for the biodiversity topic, all employees and stakeholders must work to apply this policy. By empowering everyone to speak up and act, we ensure this policy is fully met.

April 2025

Sami Takaluoma
President and CEO
Metso
